PROFESSIONAL PROFILE

Dedicated iOS Software Engineer with a strong foundation in native Apple platforms and a distinct sensibility for graphic design and user experience. Adept at architecting high-performance, robust mobile applications utilizing Swift and Objective-C. Combines deep technical proficiency in modern architectural patterns (MVP, MVVM, Clean Architecture) with cross-platform versatility across Flutter and Android to deliver seamless, offline-capable, and visually compelling mobile ecosystems.

SKILLS

Apple Platforms & Languages: Swift 5+, Objective-C, UIKit, Auto Layout, UICollectionViewCompositionalLayout, CoreData

Cross-Platform & Android: Dart, Flutter, Kotlin, Java, Jetpack Compose, Android SDK, Room, WorkManager

Architecture & Design: MVP, MVVM, MVC, Clean Architecture, Protocol-Oriented Programming (POP), Cubit (BLoC)

Frameworks & Infrastructure: Alamofire, SDWebImage, Retrofit2, RxJava3, Firebase, SQLite, Hive

Engineering Practices: Git Version Control, Dependency Injection, Offline-First Synchronization, Memory Management, UI/UX Mechanics

PROJECTS

SportsApp | Native iOS [GitHub Repository](#)

Stack: Swift 5+, UIKit, MVP, Protocol-Oriented Programming, CoreData, Alamofire

A high-performance, native iOS application engineered to deliver real-time sports telemetry, dynamic league tracking, and robust offline capabilities.

- Architected advanced data presentation dashboards using **UICollectionViewCompositionalLayout** to support fluid, multi-directional scrolling segments.
- Engineered a highly responsive, **offline-first** user experience backed by CoreData, allowing intelligent network monitoring to gracefully handle connectivity drops.

- Integrated the **AllSportsAPI** for asynchronous retrieval of upcoming events, match results, and granular player statistics.
- Delivered native **Dark/Light mode** adaptation and full **RTL layout support** for Arabic localization.

ToDo App | Native iOS [GitHub Repository](#)

Stack: Objective-C, UIKit, Foundation, MVC, UserDefaults

A lightweight, natively optimized task management utility built strictly with Apple's core frameworks.

- Designed a streamlined user interface leveraging Storyboards, **UITableView**, and **UISegmentedControl** for precise state management (To Do, In Progress, Done).
- Programmed an efficient local serialization pipeline using **NSUserDefaults** to ensure immediate offline data retrieval and persistence.
- Developed sophisticated search and prioritization logic to organize tasks dynamically by High, Medium, and Low importance.

Coloring Studio | Cross-Platform [GitHub Repository](#)

Stack: Flutter, Dart, Cubit (BLoC), Colormind API, Hive

A precision-engineered utility application for dynamic color palette generation, built to assist designers and developers.

- Structured a modular, **Feature-first architecture** driven by the **Cubit** state management pattern to maintain strict separation of UI and business logic.
- Integrated the **Colormind API** to parse complex color data, backed by a **Hive** local database for instant, offline access to saved palettes.
- Designed a fluid onboarding flow utilizing **Lottie** animations, paired with secure user session management.

FoodPlannerApp | Native Android [GitHub Repository](#)

Stack: Java, Android SDK, MVP, Repository Pattern, RxJava3, Retrofit2, Firebase

A comprehensive meal scheduling ecosystem integrating remote data synchronization, video playback, and local caching.

- Built a robust, reactive data pipeline via **RxJava3**, orchestrating data flow between the **TheMealDB API** and a local **Room** database.
- Integrated secure **Firebase Authentication** alongside **Google Identity Services**.
- Embedded the **Android YouTube Player API** for synchronized, in-app step-by-step video instructions.

Weather Mobile App | Native Android [GitHub Repository](#)

Stack: Kotlin, Jetpack Compose, MVVM, Clean Architecture, WorkManager, OpenWeatherMap API

A modern meteorological application leveraging declarative UI and advanced background processing.

- Constructed a fully declarative interface using **Jetpack Compose** and **Material 3**, managed by **Kotlin Coroutines** and **StateFlow**.
- Engineered precise background synchronization using **Android WorkManager** to dispatch timely, system-level weather alerts without blocking the main thread.
- Embedded the **MapLibre SDK** to render an interactive, graphical visualization of geographic weather conditions.

EDUCATION

Diploma in Mobile Applications Development (Native)

Information Technology Institute (ITI) | Oct 2025 – Aug 2026

- Intensive, 9-month specialization focusing on advanced iOS/Android engineering, system architecture, and the deployment of production-grade mobile applications.

B.Sc. — Computer Science (Software Industry and Multimedia)

Faculty of Science | 2021 – 2025

- Strong foundation in Software Engineering principles, algorithms, and system design.
